I am a beginner front-end developer, ready to take on new challenges.

For nearly a decade, I was a **professional poker player**. To be successful in this field, I had to **constantly learn** new strategies and **keep up to date with new software**. Thanks to millions of hands played during my career, I'm used to **making tough decisions under a lot of pressure**, and a small edge of the professional player on the average player pool makes **attention to detail** crucial. Last but not least, poker is a game of skill, so one can't be successful without **thinking ahead and strategic planning**. I hope that the above skills will also help me to become the perfect fit for your company.

When it comes to learning programming, the most satisfying thing for me was getting to know new technologies and solving problems. **Focus, curiosity and analytical thinking** are the main qualities that will help me to become your future employee. I encourage you to familiarize yourself with my projects:
